Consulting One Internet Connect

Business Networking Made Easy

No doubt your business relies heavily on Internet access for a variety of critical operations. Whilst Internet connectivity is an enabling technology it comes with its own risks and challenges. Without appropriate security configuration, software updates and auditing you may never know that your organisation has been compromised.

Consulting One's Internet Connect provides a fully-managed solution on high-quality hardware utilising the ISP of your choice. We manage the hardware devices as part of a large fleet and perform maintenance and updates constantly to protect your networks from outside threats.

- No Setup fees for 2 year agreements
- We manage the relationship with the ISP so no additional service costs to deal with outages and changes
- Many benefits of using our hardware including built-in warranty, support and all updates. We maintain spares with priority replacement. If your needs evolve we can even upgrade you to a different model avoiding re-purchasing equipment.
- Full 24x7 monitoring of the service with traffic analysis gathered and reviewed
