Consulting One VPN Connect

Business Networking Made Easy

Virtual Private Networks (VPNs) provide a cost-effective means to connect multiple business locations together utilising Internet connections. A VPN allows for network resources such as email, files, applications (and even phones) to be shared across physical locations with significant savings to be realised. However, a badly-implemented VPN that is improperly managed and configured can cost you more than just money.

Consulting One's VPN Connect provides a fully-managed solution on high-quality hardware utilising the ISP of your choice. We manage the hardware devices as part of a large fleet and perform maintenance and updates constantly to protect your networks from outside threats.

- No Setup fees for 2 year agreements
- We manage the relationship with the ISP so no additional service costs to deal with outages and changes
- Many benefits of using our hardware including built-in warranty, support and all updates. We maintain spares with priority replacement. If your needs evolve we can even upgrade you to a different model avoiding re-purchasing equipment.
- Full 24x7 monitoring of the service with traffic analysis gathered and reviewed
